

# > Our mats help to **save the planet**

Since 2017 all new **phs** mats have been constructed from ECONYL™ yarn which is a 100% regenerated and regenerable Nylon 6, made from waste, such as fluff from carpets, textiles and recovered fishing nets disposed in the sea. So, our mats are not only helping keep your floors clean, they are helping to clean up the oceans.

## Did you know...

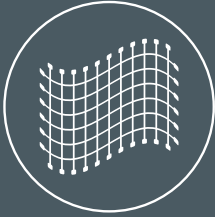

640,000 tonnes of fishing nets are abandoned in our oceans each year.

A Nylon fishing net will take approx. 400 years to decompose.

# > From the sea to your door

1

## Fishing nets are recovered...

Abandoned fishing nets discarded around the world are dredged from the oceans, supporting marine life.

2

## Nylon 6 waste is regenerated...

Once collected, the nets and other Nylon 6 waste are processed by Aquafil into regenerated ECONYL fibre.

3

## The mats are installed...

Our mats prevent slip hazards and minimise health and safety risks to our customers – even at Buckingham Palace.

4

## Life after life...

Once they've served their purpose, they're recycled again as equestrian bedding or turned into Refuse Derived Fuel to create energy.

## Our quality commitment

As the leading hygiene services provider in the UK, Ireland and Spain, providing floorcare services to over 26,500 locations, we understand the difference high quality professional matting can make to the well-being and health and safety of our customers.
