

> Making Healthcare waste disposal even more sustainable

phs customers are telling us they want to be as sustainable as possible, and we've been listening...

Introducing a new healthcare waste disposal range

Going forward, Healthcare Sharpsafe and Clinisafe containers from **phs** will be made from a minimum of 30% recycled material. With some sizes achieving 100% recycled content in the base and 20% in the coloured lid.

Therefore, next time your bin is due for exchange, it may be replaced with a grey-bodied bin instead of a yellow one. However, the lid to denote the waste stream will remain the same colour as always.

phs gives clients the green option in waste management

The new containers will be rolled out from April 2022, so as an eco-conscious customer, you can benefit from these new sustainable bins as soon as possible.

The healthcare industry is promoting the use of disposal containers made from recycled material, so you can be safe in the knowledge that you'll continue to receive a high-quality and safe service from **phs**.

Benefits to your company:

- Using the new Sharpsafe and Clinisafe containers will mean a significant reduction in your carbon emissions, helping your organisation to meet its environment targets.
- While the raw materials used to make the containers have changed, there is absolutely no compromise on the high-quality.
- Grey Sharpsafe containers are certified to ISO23907-1:2019 for sharps injury protection as standard; they're also BSI (British Standards Institute) Kitemarked and certified to UN3291.
